

Tools to Assist Reopening Amid Covid-19

- Training Certification
- Remote Supervision
- Enhanced Screening of Staff
- Tracking of Disinfected Space
- Real-time Access to Cleaning Status

An Introduction

The SaaS Solution for Managed Services

Until now, managed service providers captured information manually using spread sheets, binders, and even hand-written notes to manage data and teams, with limited transparency and no solution for language barriers. This resulted in significant risk for service teams and the facilities they serviced.

4insite's innovative and comprehensive SaaS solution is built on our founders' 38 years of deep domain expertise in facilities management and broad understanding of operations to service providers.

Merging data-transparency, remote management, and real time communication in over 60 languages in the 4insite platform, your site teams, clients, and vendors can now instantly share usable information in real-time and in their native languages.

Every task at the facility is performed and completed, and everyone involved is connected, trained, engaged, and empowered.

Tools to Assist Re-opening Amid Covid-19

4insite has partnered with our clients, who are the best subject matter experts to address a number of Covid-19 re-opening challenges. We can now offer those solutions to all customers.

1

Training Certification

Ensure that your teams are committed to their safety and the safety others with targeted Covid-19 training.

3

Enhanced Screening of Staff

Protect all employees with a mobile-enabled screening process to prevent sick employees from entering your buildings.

5

Real-time Access to Cleaning Status

Provide your building occupants with the tools and data they need to feel confident in their own safety.

2

Remote Supervision

Complete oversight gives managers the freedom to supervise teams from their desk, walking around the facility, or working from home.

4

Tracking of Disinfected Space

Improve your employees' ability to focus, collaborate, or even just celebrate a staff birthday again by tracking which spaces are safe, at all times.

1 Training Certification

In a global pandemic, timing is of the essence. Real-time information is critical to decision-making and to ensure compliance with best practices.

With a built-in LMS platform, management can quickly and effectively distribute training materials at scale and be certain that every staff member is current on the latest methods, processes, and procedures. Customized training tools, individual progress reports, and completion tracking bring transparency and confidence where it is needed most

Pandemic Response

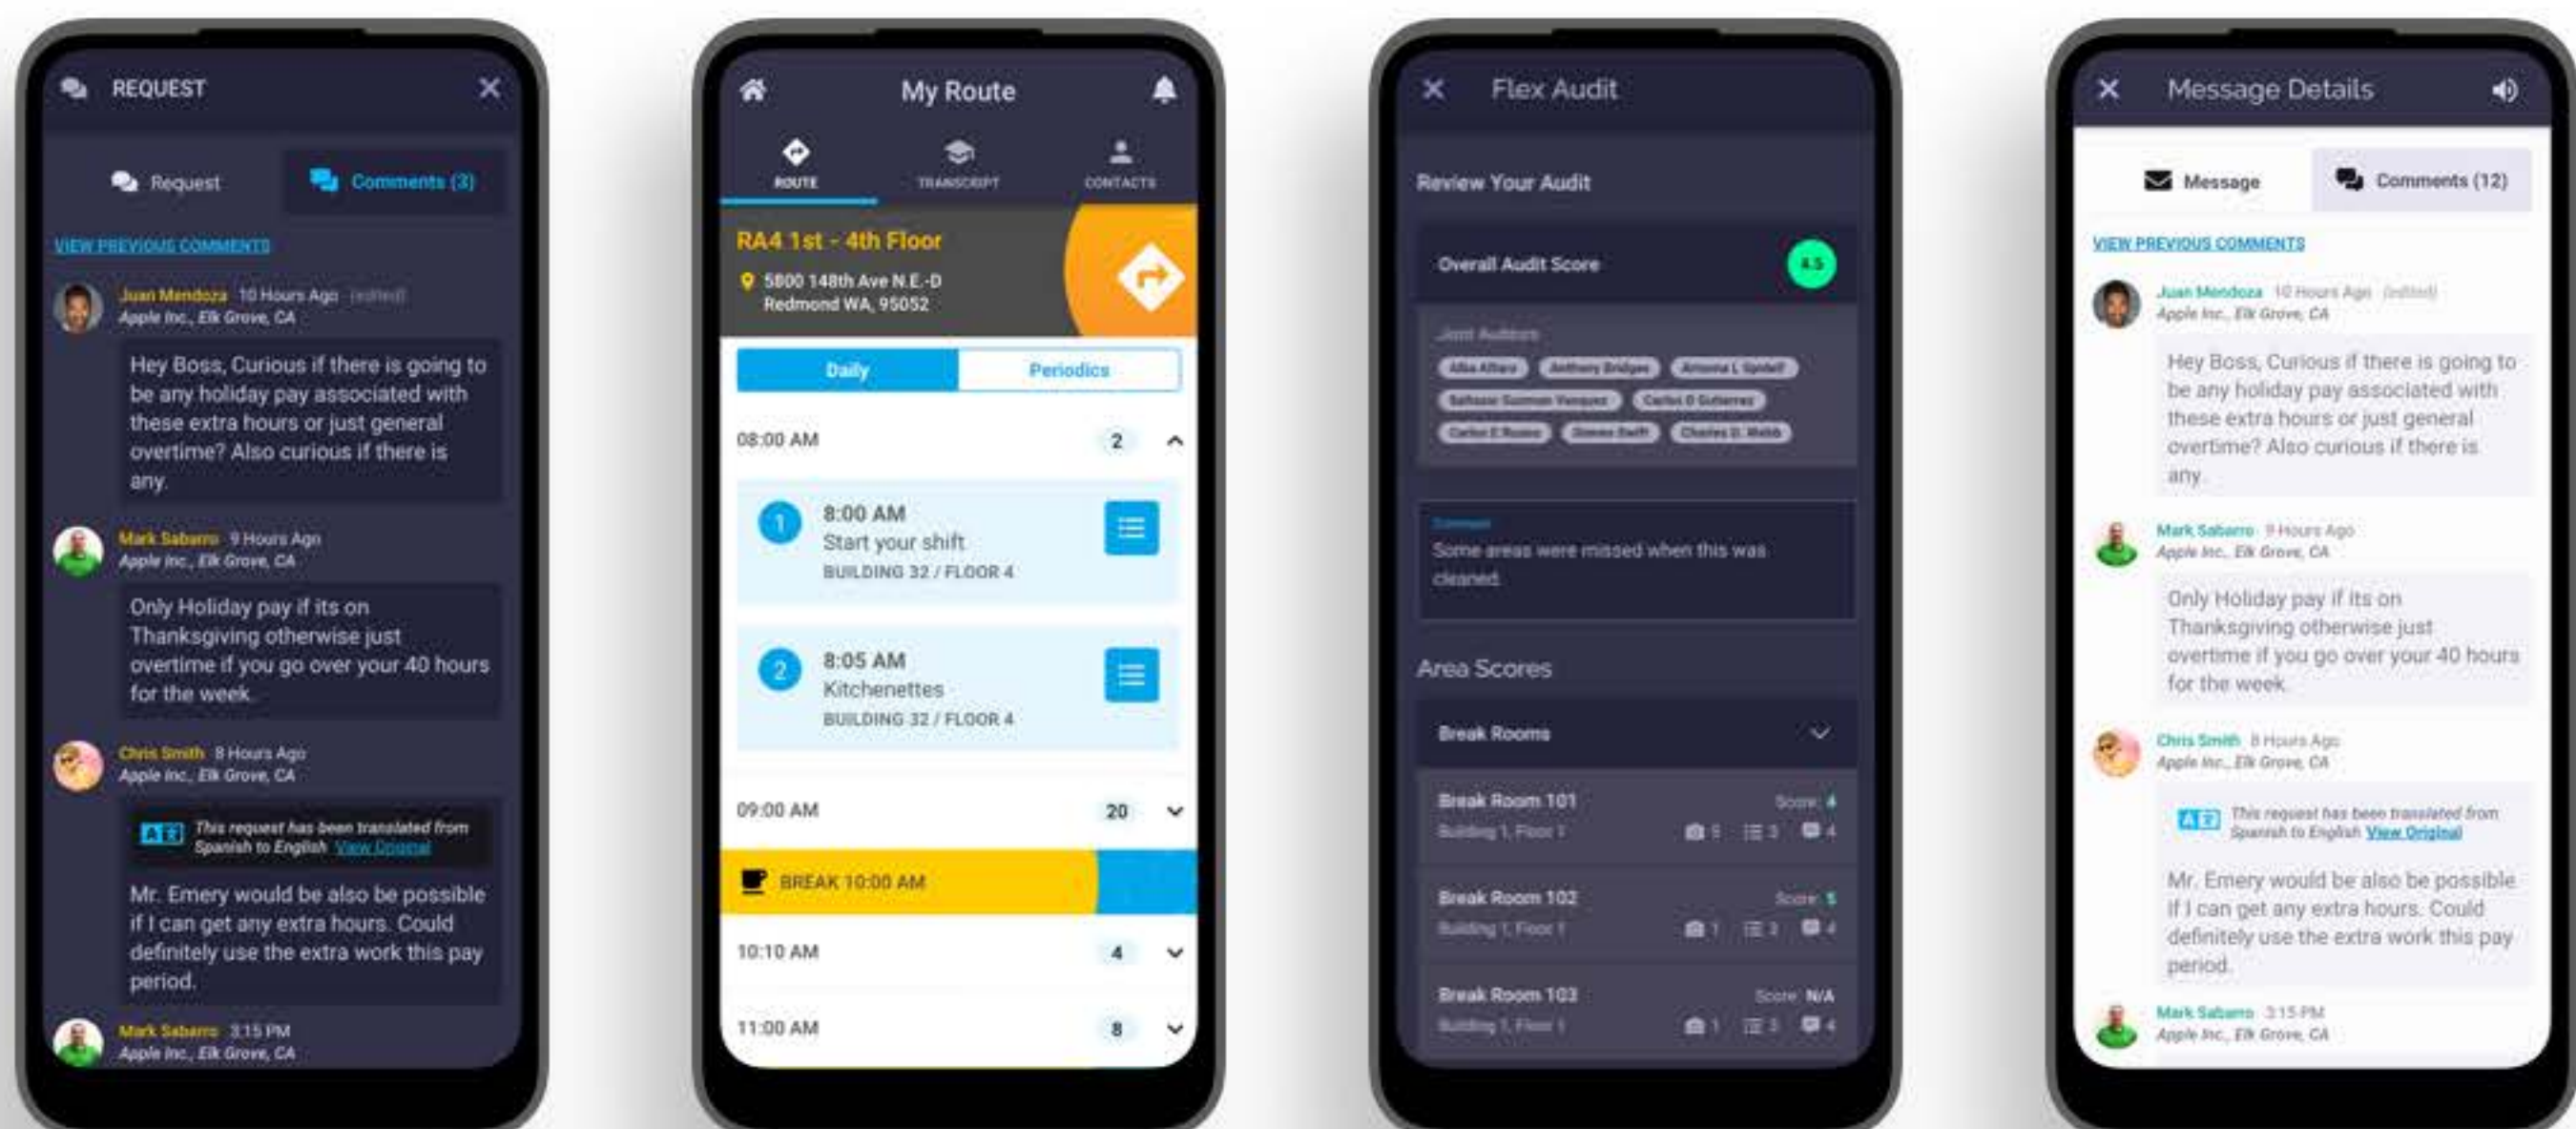

Knowing is half the battle

Having the ability to rapidly deploy training or inform on new procedure at scale is essential to help the entire team to work safely, efficiently and perform tasks to the standards required to keep the environment safe for everyone.

2 Remote Supervision

Enhanced social distancing presents new challenges to the workplace. In a world where the most efficient communication has always been face-to-face, how do we maintain momentum and oversight during a pandemic?

4insite provides your management teams the ability to supervise every aspect of the day-to-day workflow, from anywhere they need to be. From route assignment to task management to regulatory compliance, our system provides monitoring tools and pushes messages directly from managers to employees and back for complete coverage, saved into an easy-to-read historical record.

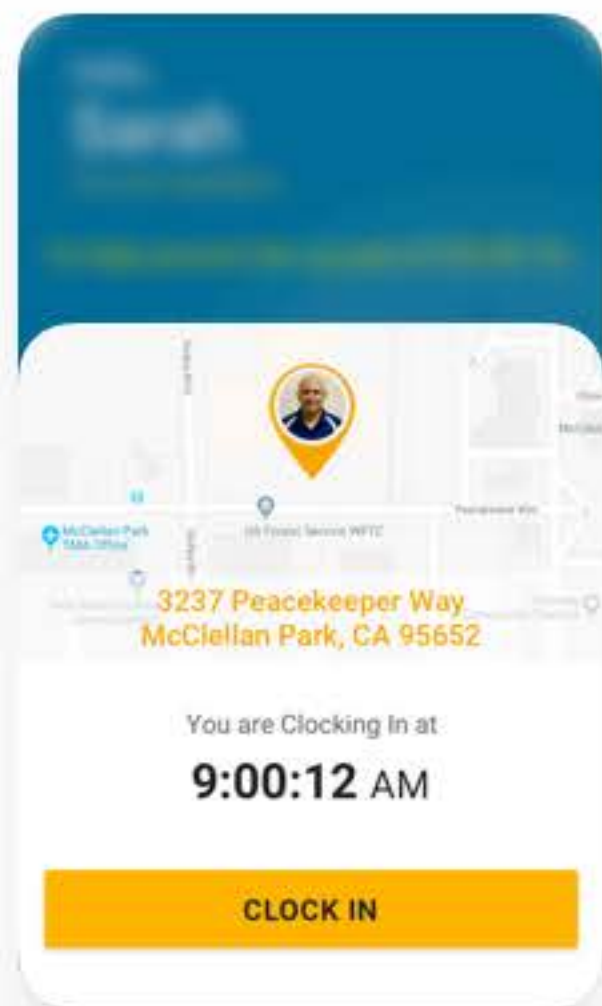

4insite Breaks the Language Barrier

4insite automatically translates instructions, statuses, manager messages, and more to over 60 languages, allowing diverse teams of employees to communicate in their preferred language without error.

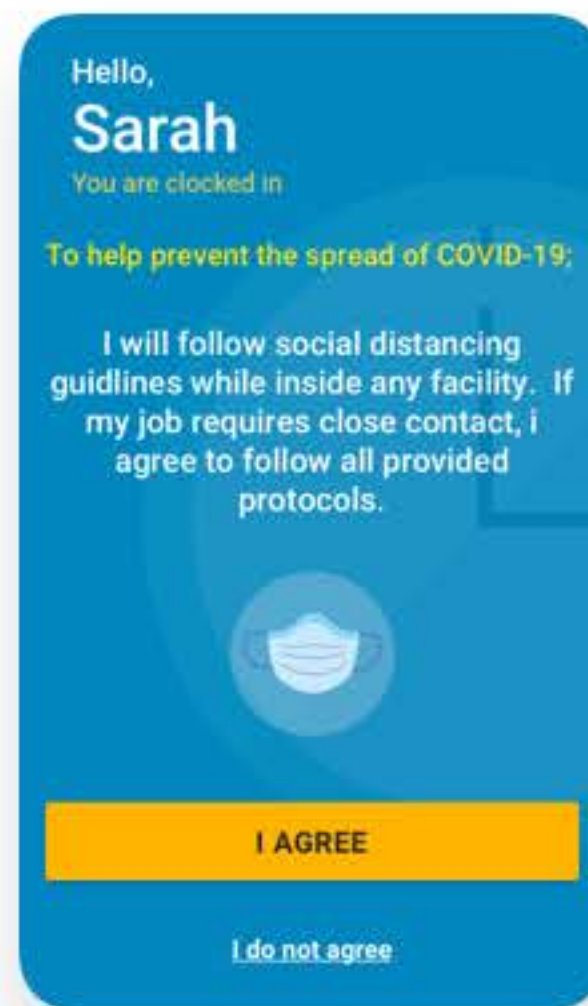

3 Enhanced Screening of Staff

From the moment an employee arrives at a site, an enhanced screening process is followed to prevent unhealthy workers from entering the facility. This screening process is completed directly from the employee's assigned mobile device to ensure that social distancing is maintained, and Managers are immediately notified of any adverse responses.

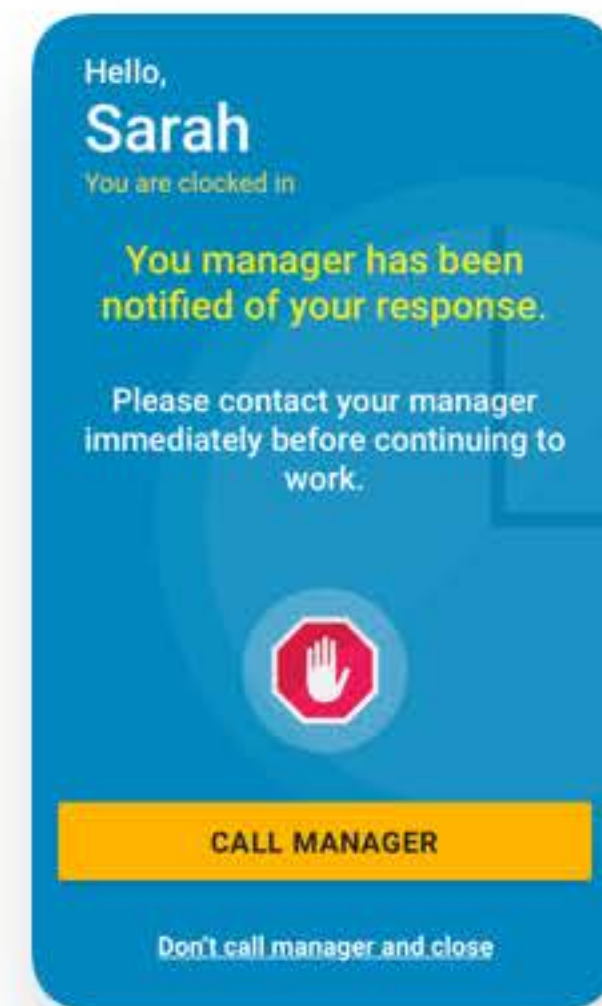

1

Employee arrives at the site to begin the shift and uses the 4insite mobile app to Clock-in.

2

Immediately after Clock-in, COVID-19 screening is initiated directly from the mobile device.

3

When an adverse response is entered, the employee is directed to stop work and a notification is automatically sent to the Manager.

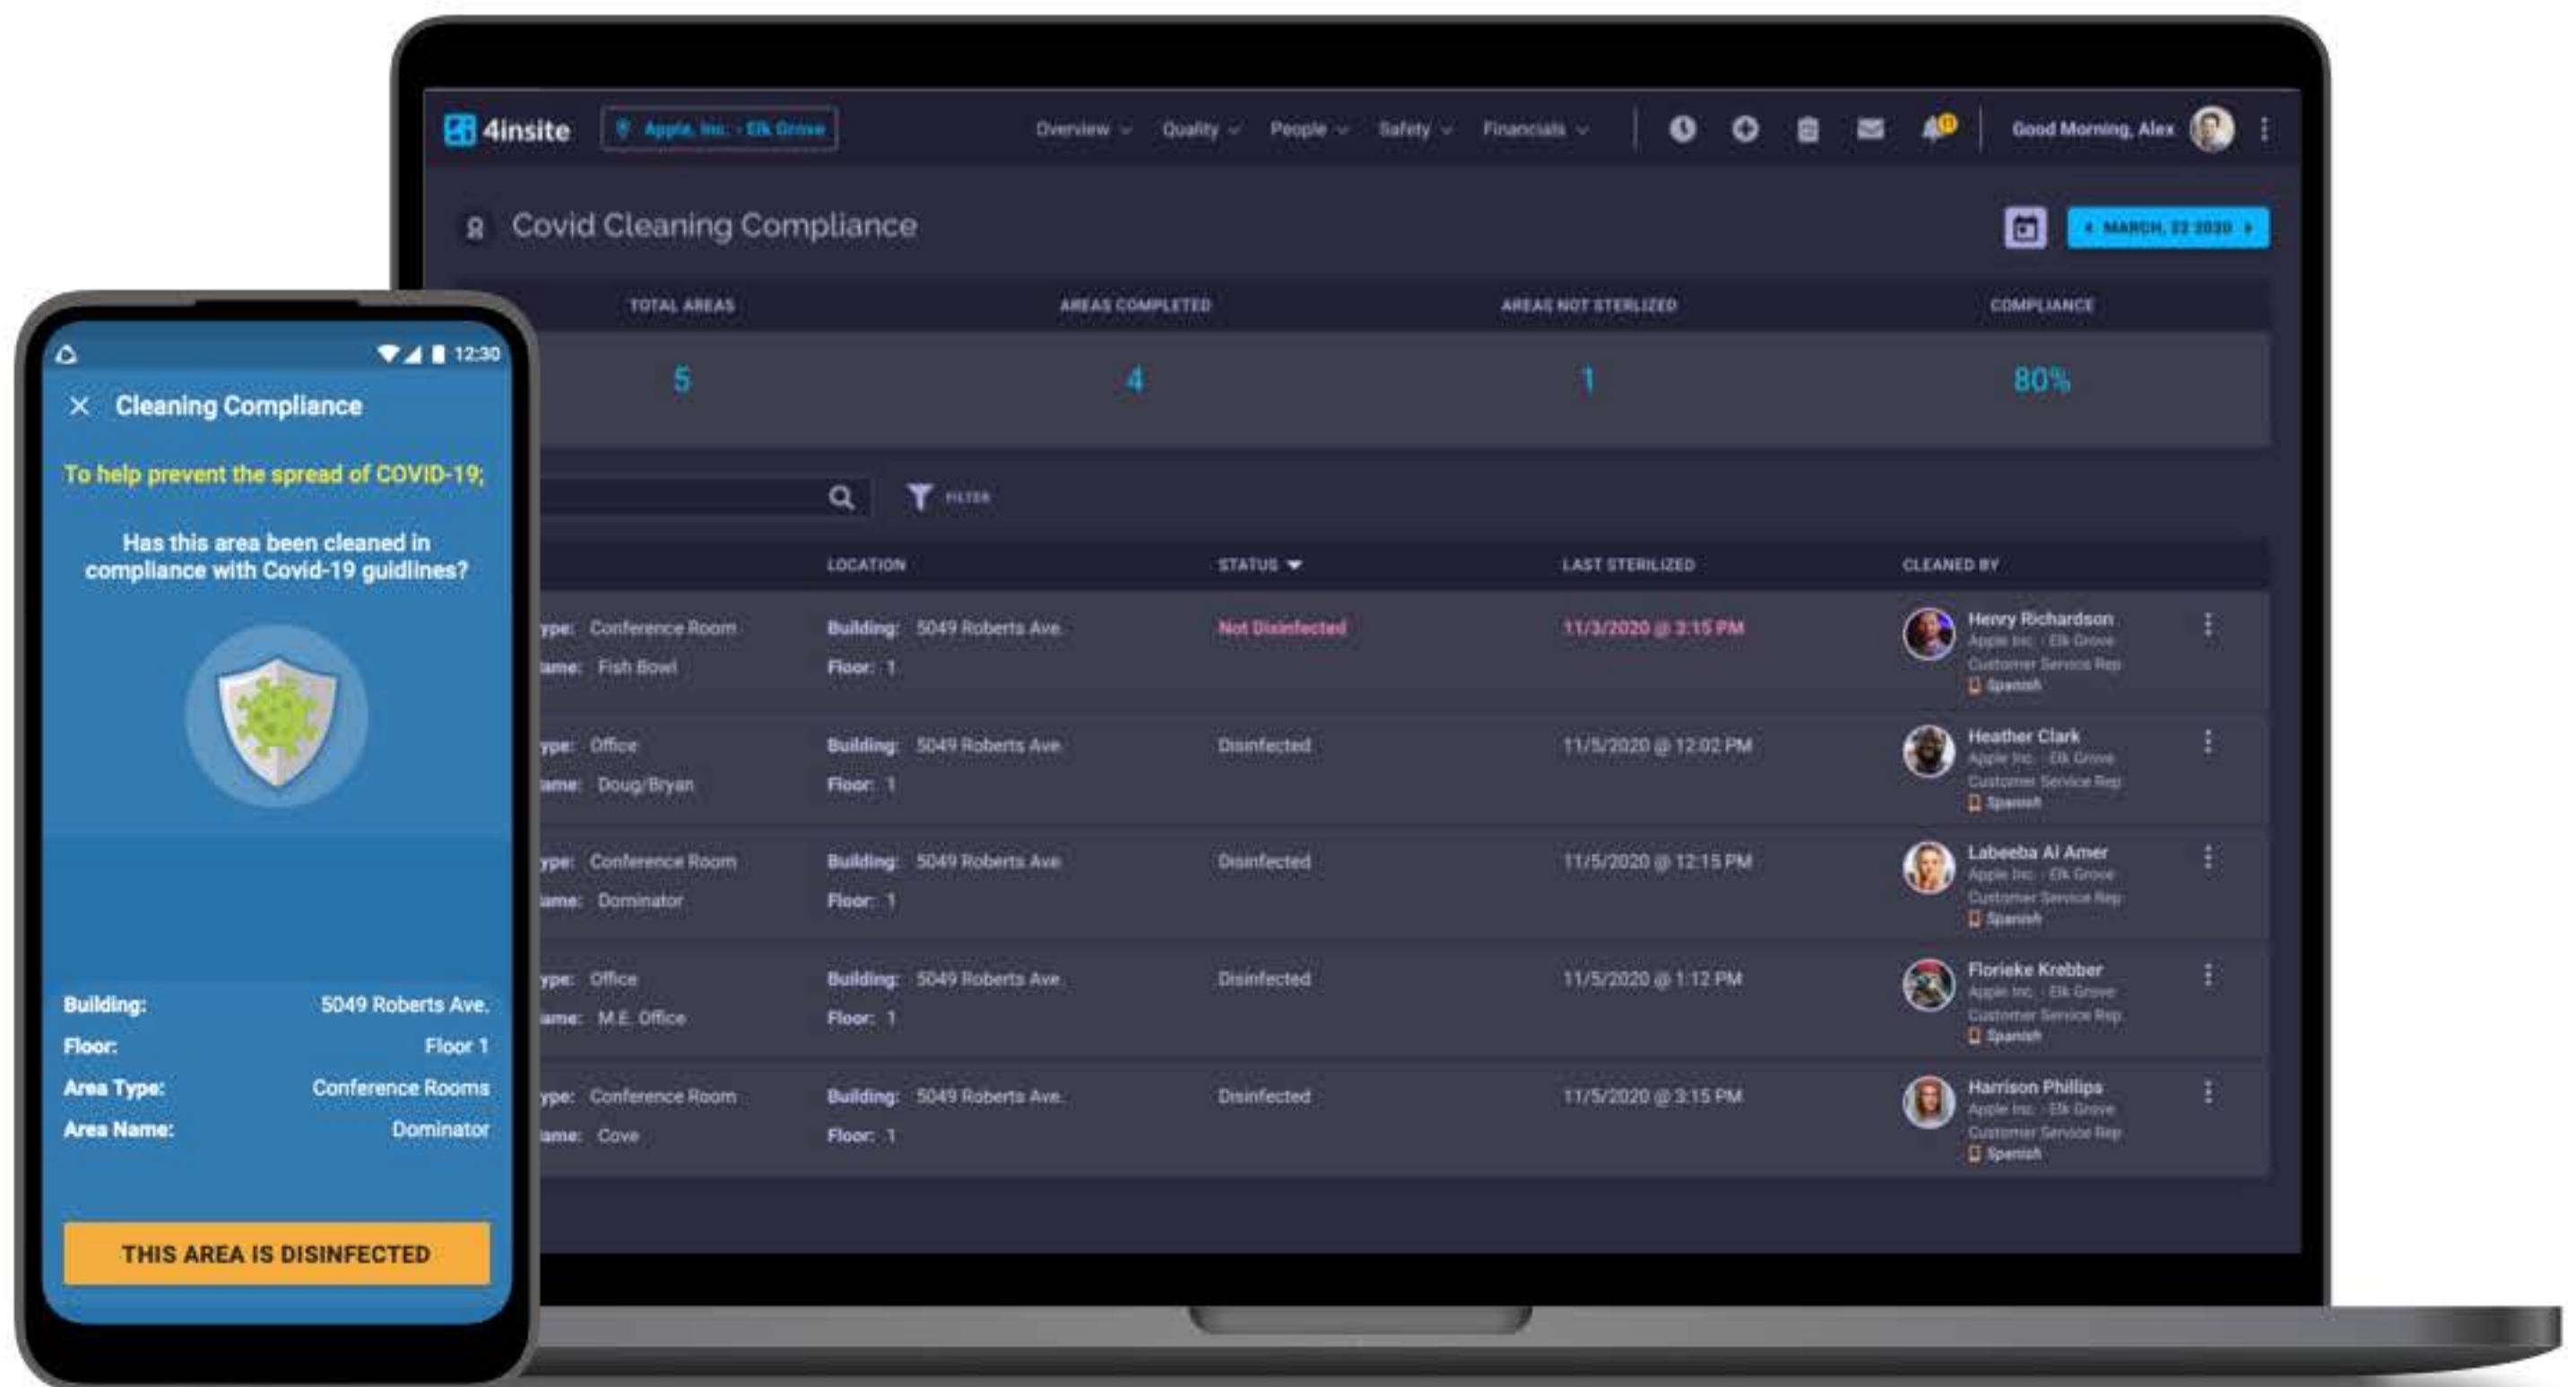

Adverse Responses to the COVID-19 Screening Questions result in immediate notifications and stop work order.

All Managers have 24 hour access to the complete set of responses

4 Tracking of Disinfected Space

With new requirements in place around the daily disinfection of common areas, it is more important than ever to track what is done against what must be done.

4insite has added a specific task tracking feature which enables employees to use their mobile device to validate when an area has been disinfected. This new real-time feature validates that new requirements are met so that managers can easily report compliance.

We can configure this feature to work with Multiple Ways to Validate

5 Real-time Access to Cleaning Status

As building occupants return to the office, they want to do so safely. Providing them access to data-driven information on when a room was last cleaned or disinfected will aid in re-building their confidence and comfort in the office.

Because 4insite collects real-time data on when an area was serviced, we can make that information instantly available to your whole company. Through our SMS text-enabled Chat-Bot, anyone can simply text “status for conference room 1a” to the 4insite platform and receive an instant reply with the last time that room was either serviced or disinfected.

Frictionless

By enabling building occupants to text their request, they do not need to touch any common devices nor do they need to download any special applications. Because each facility has a unique phone number, the Chat-Bot already knows where the user is located.

It is undeniable that the entire world has been affected by the COVID-19 Pandemic. But, with 4insite as your SaaS digital partner, managing this truly invisible enemy is less daunting.
